

SERENEDI

HEALTHCARE INTEGRATION PLATFORM

DATA SHEET

SUMMARY	<p>SERENEDI is an enterprise middleware integration platform that runs on Windows / Linux (Ubuntu 18+ and equivalents) operating systems designed to bridge SQL databases with HIPAA EDI transactions. The default functionality provides drag-and-drop EDI to XML / CSV / Single Database Table / Multiple Database Table functionality for thirteen EDI transaction sets. SERENEDI can completely manage database schemas, automatically growing them according to the data provided using pre-made translation dictionaries covering all valid EDI elements and situations. SERENEDI stores a complete snapshot of the incoming business data and metadata; translations can be reversed to re-create the original EDI files, or create new outbound EDI files.</p> <p>EDI operations can be tested using the built-in GUI, which is where file triggers and connection options can be customized and maintained. Custom orchestration can be designed using the PowerShell Core scripting language, with dozens of customized commands directly controlling the SERENEDI engine.</p>
PLATFORMS	Windows 10, Windows Server 2012 and above, Linux Ubuntu 18 +
DATABASES	Oracle (ADW/ATP included), SQL Server 2008+
SPECIFICATIONS	270, 271, 276, 277, 277CA, 278 Request, 277 Response, 820, 820X, 834, 835, 837P, 837I
CODESETS	Claim Adjustment Reason Codes, Frequency Codes, ICD 9 CM, ICD 9 PCS, ICD 10 CM, ICD 10 PCS, ISO Country Code, NDC Code, Provider Taxonomy, Remittance Adjustment Reason Code, State Abbreviations. Monthly updates available via client's Secure FTP account.
INTEGRITY ENGINE	SNIP Type 4 & 5 checks are supported for the 834, 835, 837 P and 837 I specifications covering over 300 rules. Rules are user-extensible.
SUPPORT	Unlimited Next-Business Day Email Support and limited Phone/Conference support is included with all licenses. Customized solutions & consulting services available, \$200/hr.
LICENSING	See https://chiapas-edi.org/index.php/licensing/ for licensing fees and options.
